Background

Device

Physiological Need

Alternatives

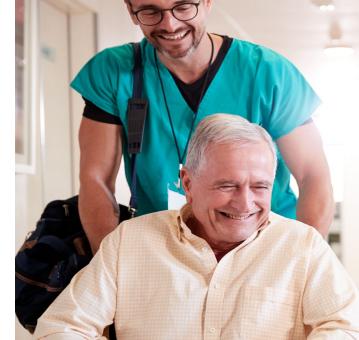

Problem Statement

Emergency Medical Service (EMS) personnel encountering stairs while transporting non-ambulatory patients need a device that safely and easily transports patients without increasing their risk for an L5-S1 herniated disc.

Stakeholders

EMS Personnel

Patients

Hospitals

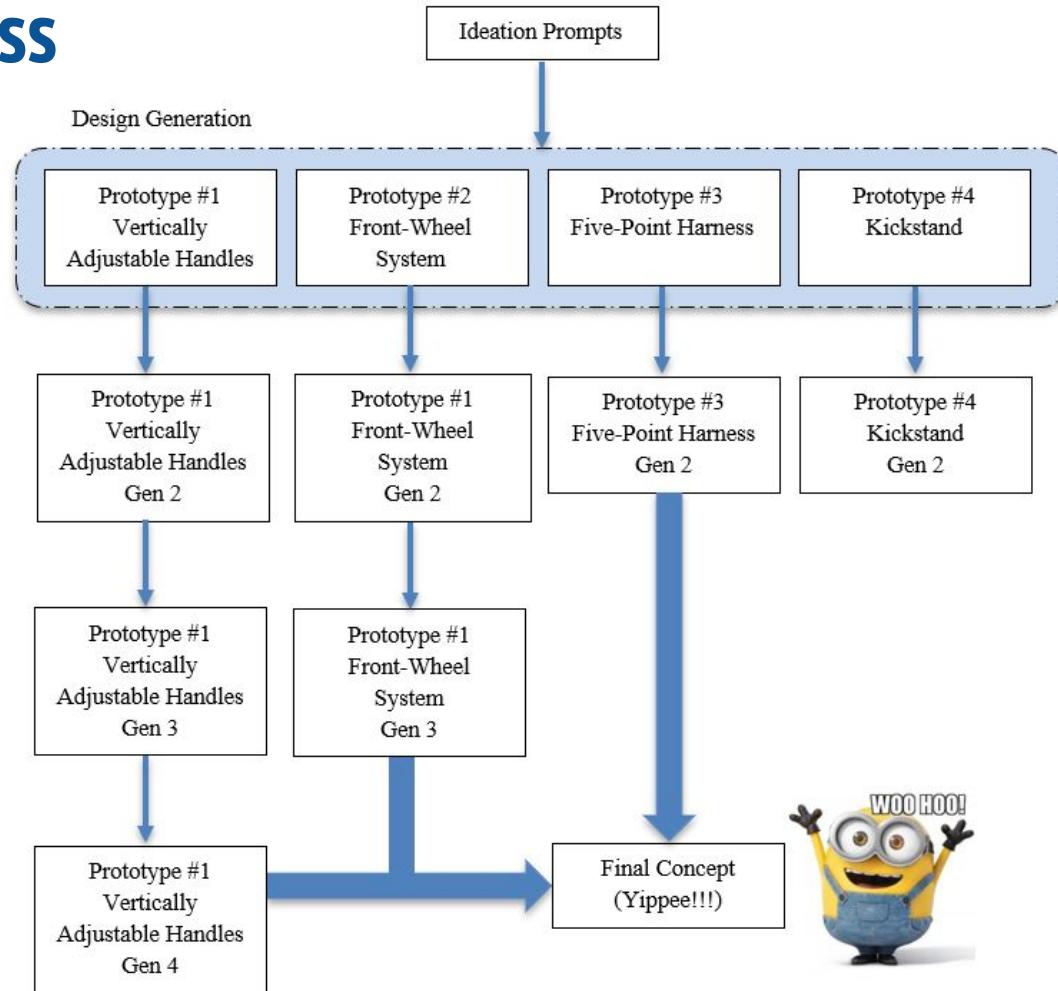

Multi-level Buildings

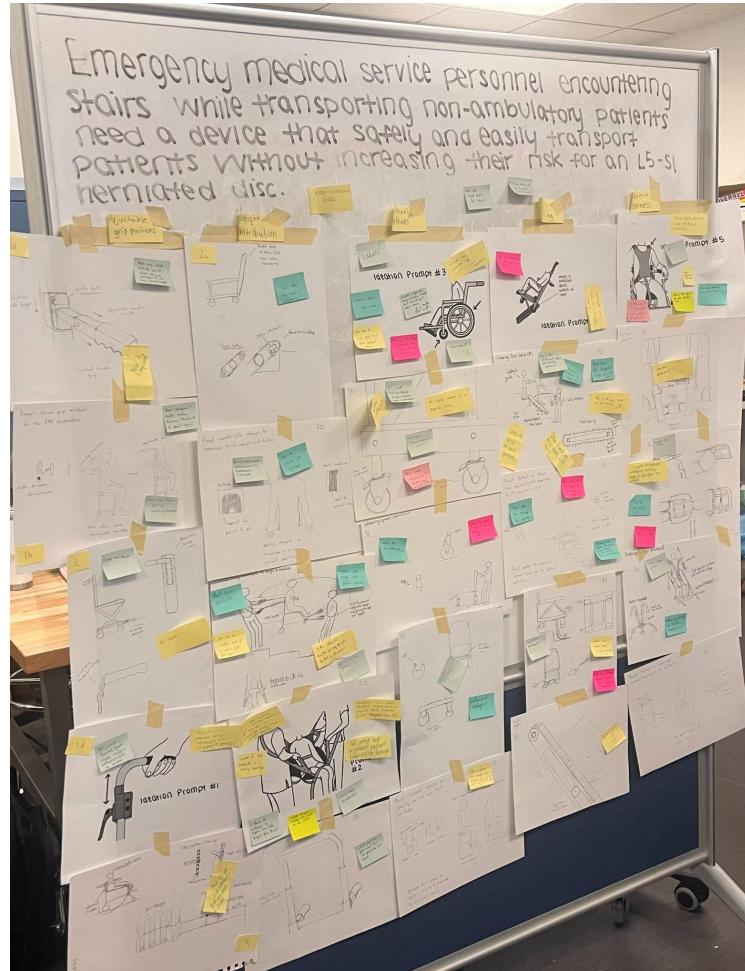

Manufacturers

Design Process

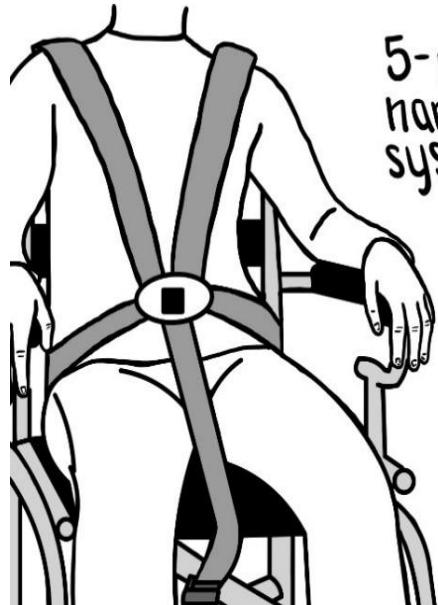

Concept Development

- Utilized a Pugh matrix to evaluate sketches against criteria including:
 - Benefits to the user
 - Simplicity
 - Ability to prototype quickly
 - Use of low-cost materials
 - Minimum training required

Patient Restraint System: Prototyping Process

Concept Sketch

Rapid Prototype

Gen 2

Patient Restraint System: Testing Process

Predicate baseline

	Strap Time(s)	Separation(in)
Mean	32	5.48
Standard Deviation	5.25	3.51

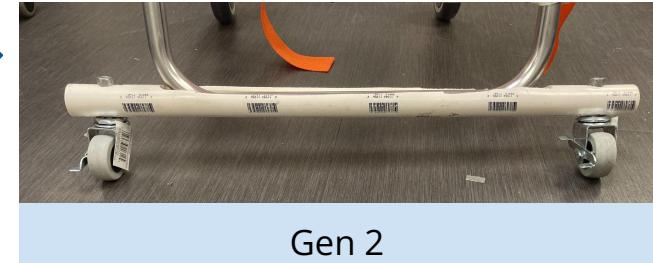

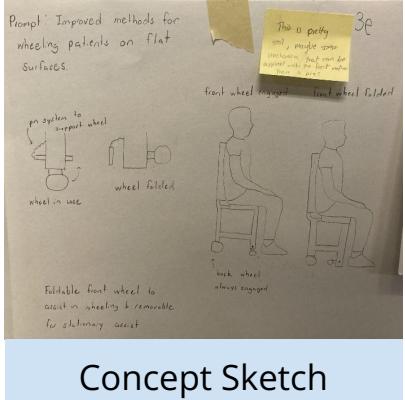

Gen 2 prototype

	Strap Time(s)	Separation(in)
Mean	62	1.39
Standard Deviation	15.8	0.74

Statistical Analysis

- **Strap Time** -> p value of 0.000013
- **Separation** -> p value of 0.0016

Front Wheel System: Prototyping Process

Front Wheel System: Testing Process

Data

Statistic	Initial Deployment	Final Deployment
Mean	12.799 s	8.398 s
Standard Deviation	2.7773 s	1.7926 s
Standard Error of the Mean	0.8782 s	0.5669 s
Degrees of Freedom	9	9

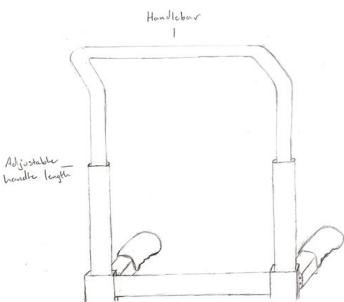

Statistical Analysis

Statistic	Value
Paired t-test	4.0345
One-sided p-value	0.0015
Standard Error of Difference	1.091

Design Inputs

- Deploy time must be less than 10 seconds
- Each front wheel must support 750 N/168 lbs (Appendix B)

Vertically Adjustable Handles: Prototyping Process

Concept Sketch

Rapid Prototype

Gen 2

Gen 3

Design Inputs

- Handles must have a vertical height range of at least 4.18 inches

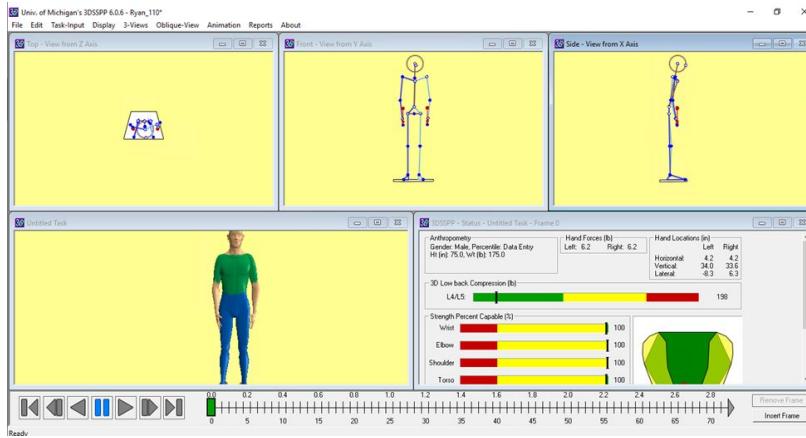

Rapid Prototype

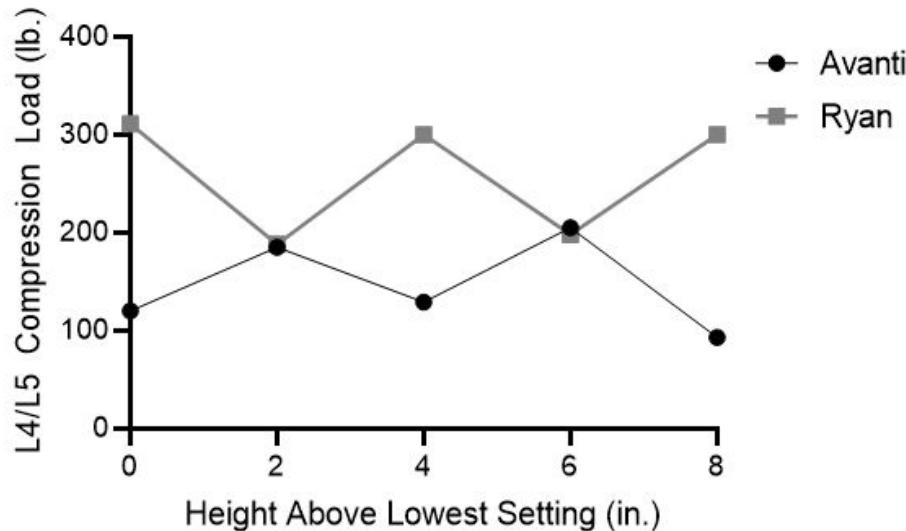

Gen 2

Vertically Adjustable Handles: Testing Process

Vertically Adjustable Handles: Testing Process

Data

Statistical Analysis

Statistic	Value
Unpaired T test (p-value)	0.0110

Other Ideas

Concept Sketch

Rapid Prototype

Gen 2

Final Prototype

Fusion 360 Model

User Feedback

- **Patient Restraint System:** interesting design, very secure
- **Front Wheel System:** simple, but effective
- **Vertically Adjustable Handles:** ensure proper locking mechanism

Market Segment Analysis

Total Addressable Market (TAM)

- \$7.46 billion

Service Available Market (SAM)

- \$408 million

Service Obtainable Market (SOM)

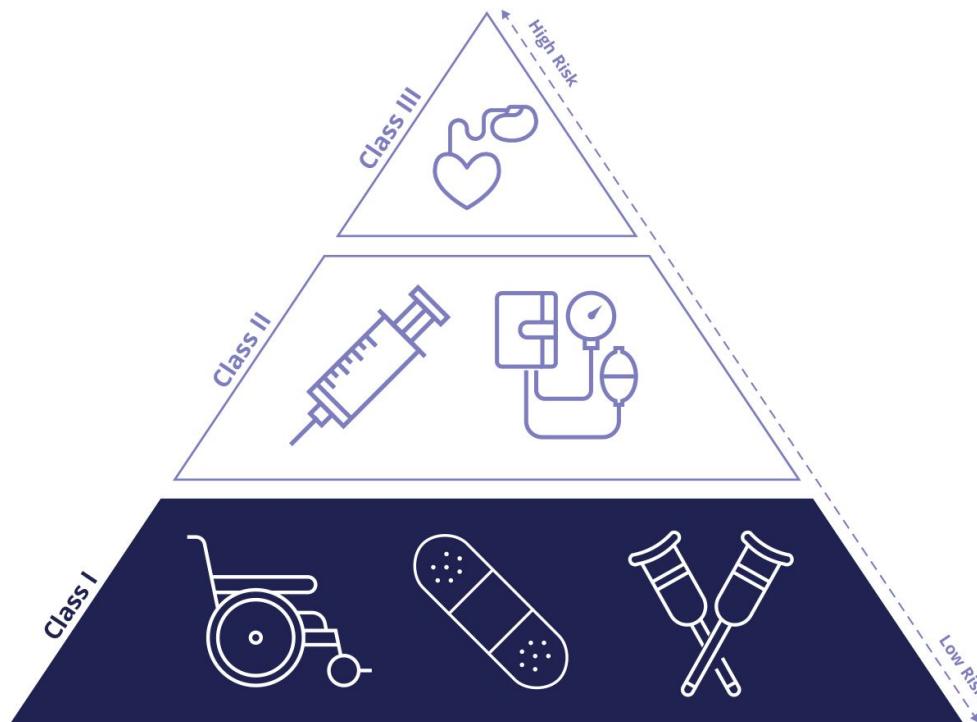

- \$37.9 million

Emergency Evacuation Chair Market Report Coverage

REPORT COVERAGE	DETAILS
Market Size Value In	US\$ 90.61 Million in 2022
Market Size Value By	US\$ 120.95 Million by 2028
Growth Rate	CAGR of 4.93% from 2022 to 2028
Forecast Period	2022-2028
Base Year	2023
Historical Data Available	Yes
Segments Covered	Type and Application
Regional Scope	Global

Value

- Class I medical device and 510(k) exempt
- Less than one month to gain approval from FDA

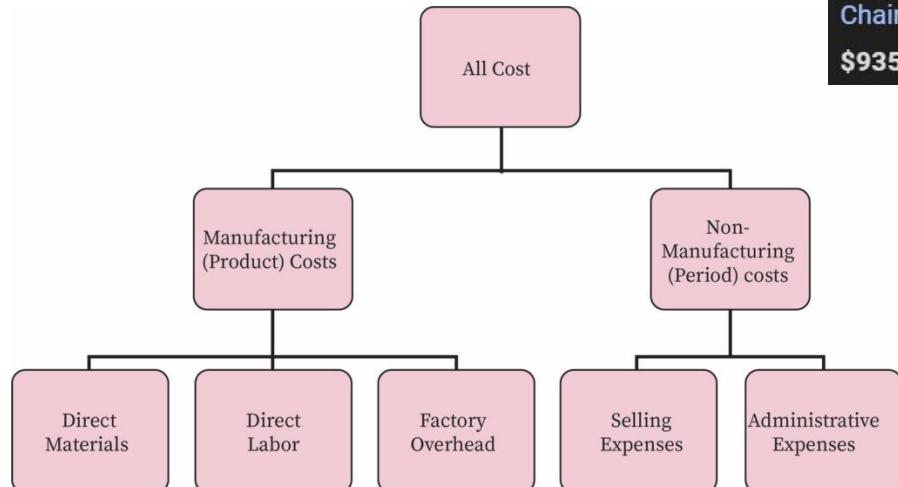

Value

- Costs to begin production may reach up to \$500,000
 - May take up to six months to begin manufacturing
- Other costs include registration, permits for sale, and establishing distribution channels

Value

- Bill of materials: cost of one stair chair is \$323 (Appendix D)
 - Other costs: labor, utilities, other overhead expenses
- Sales price: ~\$750
 - More affordable than most other options

Value

- Has benefits over existing solutions
- Meets both user needs and unmet needs
- Overall, the device is a good value over existing solutions

Appendix B

Free Body Diagram

10cm 16cm
21cm

Variables

\$R_B\$ = reactive force by ground on back wheels

\$R_F\$ = reactive force by ground on front wheels

Parameters

\$m_p\$ = mass of patient = 227 kg

\$m_c\$ = mass of chair = 15.5 kg

\$g\$ = acceleration due to gravity = \$9.81 \text{ m/s}^2\$

Equations of Equilibrium

$$\sum F_x + \sum F_y = 0$$

$$\sum F_y = R_B + R_F - W_c - W_p = 0$$

$$\sum M_B = (10\text{cm})(15.5\text{kg})(-9.81\text{m/l}) + (31\text{cm})(227\text{kg})(-9.81\text{m/l}) + (47\text{cm})(R_F) = 0$$

$$R_F = 1500 \text{ N} \quad \text{for one wheel} = \frac{R_F}{2} = 750 \text{ N}$$

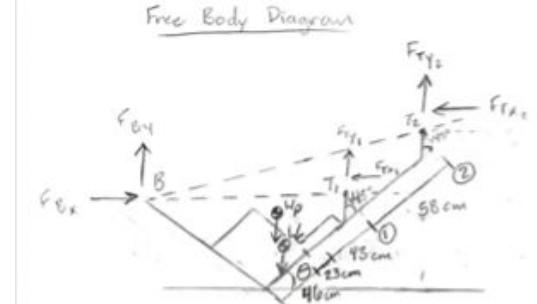

$$R_B = W_c + W_p - R_F$$

$$= (15.5)(9.81) + (227)(9.81) - 1500$$

$$= 880 \text{ N}$$

Appendix C

- At minimum vertical length, top load equals 1434 N (322 lbf) with respect to the angle
- At maximum vertical length, top load equals 945 N (212 lbf) with respect to the angle

Position 1 (Minimum position)

$$\begin{aligned} \sum F_x &= F_{Bx} - F_{Tx_1} = 0 \rightarrow F_{Bx} = F_{Tx_1} = 0 \\ \sum F_y &= F_{By} + F_{Ty_1} - W_C - W_p = 0 \\ \sum M_B &= (69\text{cm})(m_C g \cos \theta) + (69\text{cm})(m_p g \cos \theta) - \\ &\quad (112\text{cm})(F_{Ty_1}) = 0 \\ (69\text{cm})(15.5\text{kg})(9.81 \frac{\text{m}}{\text{s}^2}) \cos \theta &+ (69\text{cm})(227\text{kg})(9.81 \frac{\text{m}}{\text{s}^2}) \cos \theta - \\ (112\text{cm})F_{Ty_1} &= 0 \rightarrow F_{Ty_1} = 1434 \text{N} \cos \theta \end{aligned}$$

$$\begin{aligned} F_{By} &= -F_{Ty_1} + W_C + W_p \\ &= -1434 \text{N} \cos \theta + (15.5\text{kg})(9.81 \frac{\text{m}}{\text{s}^2}) \cos \theta + \\ &\quad (227\text{kg})(9.81 \frac{\text{m}}{\text{s}^2}) \cos \theta \\ F_{By} &= 945 \text{N} \cos \theta \end{aligned}$$

Variables

$$F_{Ty} = \text{Force applied in } y\text{-direction by top EMT}$$

$$F_{By} = \text{Force applied in } y\text{-direction by bottom EMT}$$

Parameters

$$F_{Tx_1} = \text{Force applied in } x\text{-direction by top EMT} = 0 \text{N}$$

$$F_{Bx} = \text{Force applied in } x\text{-direction by bottom EMT} = 0 \text{N}$$

$$m_p = \text{Mass of patient} = 227 \text{kg}$$

$$m_C = \text{Mass of stair chair} = 15.5 \text{kg}$$

$$g = \text{acceleration due to gravity} = 9.81 \frac{\text{m}}{\text{s}^2}$$

Position 2 (Maximum position)

$$\begin{aligned} \sum F_x &= F_{Bx} - F_{Tx_2} = 0 \rightarrow F_{Bx} = F_{Tx_2} = 0 \\ \sum F_y &= F_{By} + F_{Ty_2} - W_C - W_p = 0 \\ \sum M_B &= (46\text{cm})(m_C g \cos \theta) + (69\text{cm})(m_p g \cos \theta) - \\ &\quad (110\text{cm})(F_{Ty_2}) = 0 \\ (46\text{cm})(15.5\text{kg})(9.81 \frac{\text{m}}{\text{s}^2}) \cos \theta &+ (69\text{cm})(227\text{kg})(9.81 \frac{\text{m}}{\text{s}^2}) \cos \theta - \\ (110\text{cm})F_{Ty_2} &= 0 \rightarrow F_{Ty_2} = 945 \text{N} \cos \theta \end{aligned}$$

$$\begin{aligned} F_{By} &= -F_{Ty_2} + W_C + W_p \\ &= -945 \text{N} \cos \theta + (15.5\text{kg})(9.81 \frac{\text{m}}{\text{s}^2}) \cos \theta + \\ &\quad (227\text{kg})(9.81 \frac{\text{m}}{\text{s}^2}) \cos \theta \end{aligned}$$

$$F_{By} = 1434 \text{N} \cos \theta$$

Appendix D

Material	Quantity	Source	Cost	Description
Aluminum tube	~200 inches in length	Outsourced as uncut hollow tube	\$3.91 per foot (~\$65)	Hollow circular aluminum tube (.5 in inner diameter, .75 in outer diameter)
Aluminum tube	~66 inches in length	Outsourced as uncut hollow tube	\$3.71 per foot (~\$20)	Hollow rectangular aluminum tube (1.75" L x .75" W outer, and 1.5" L x .5 W inner)
Aluminum tube	~48 inches in length	Outsourced as uncut hollow tube	\$3.64 per foot (~\$14.5)	Hollow rectangular aluminum tube (1.45" L x .45" W outer, and 1.2" L x .2 W inner)
L-shaped stainless-steel connector	2 pieces	Outsourced as pre-made	\$3.15 per piece (\$6.30)	Holes pre drilled to support rivets and shape to match need

Appendix D

Sliding stainless steel support	2 pieces	Outsourced as pre-made	\$3.20 per piece (\$6.40)	Holes pre drilled to support screws and hollow center to support sliding handles
U-shaped stainless-steel backing	1 piece	Outsourced as pre-made	\$4.50	Holes pre drilled to support screws
Hollow stainless-steel tubing	10 in length	Outsourced as uncut hollow tube	\$2.19 per foot (~\$1.83)	1/8 in diameter
W-shaped stainless-steel support	2 pieces	Outsourced as pre-made	\$6.20 per piece (\$12.40)	Holes pre drilled to support rivets and shape to match need

Appendix D

Wheel stainless-steel support	2 pieces	Outsourced as pre-made	\$7.10 per piece (\$14.20)	Holes pre drilled to support screws and sized to support attached wheels
Large wheels	2 pieces	Outsourced as pre-made	\$9.70 per piece (\$19.40)	Rubber coated and 5.5" diameter
Small wheels and support	2 pieces	Outsourced as pre-made	\$7.50 per piece (\$15.00)	Rubber wheels with built-in braking system and 2" diameter
Waterproof Polyvinyl Chloride	~650 square inches	Outsourced as pre-made raw material	~\$0.02 per square inch (~\$13)	Will be used with injection molding to create the seat
Yarn/stitching	~36 in	Outsourced as pre-made	~\$0.01 per inch (~\$0.36)	Will be used to stitch the PVC seat

Appendix D

8 in length zipper system	2 pieces	Outsourced as pre-made	\$3.60 per 8 inch system (\$7.20)	Will be stitched into the seat. Bought as a slider and chain.
Straps	~48 in length	Outsourced as pre-made	\$1.76 per foot (~\$7.04)	1 in width
Straps	~58 in length	Outsourced as pre-made	\$2.42 per foot (~\$11.68)	2 in width
Buckle system	1 piece	Outsourced as pre-made	\$0.98	Accommodates 1 in width straps
Buckle system	1 piece	Outsourced as pre-made	\$1.67	Accommodates 2 in width straps
Rivets	16 pieces	Outsourced as pre-made	\$0.45 per piece (\$7.20)	.25 in diameter, 1 in length

Appendix D

Rivets	6 pieces	Outsourced as pre-made	\$0.76 per piece (\$4.56)	.4 in diameter, 1.25 in length
Screws	6 pieces	Outsourced as pre-made	\$0.29 per piece (\$1.74)	1/8 in diameter, 3 in length
Screws	2 pieces	Outsourced as pre-made	\$0.54 per piece (\$1.08)	5/8 in diameter, 2.75 in length
Hex nut	2 pieces	Outsourced as pre-made	\$0.48 per piece (\$0.96)	5/8 in diameter
Hex nut	4 pieces	Outsourced as pre-made	\$0.23 per piece (\$0.92)	1/8 in diameter

Appendix D

Spring	2 pieces	Outsourced as pre-made	\$0.70 per piece (\$1.40)	½ in diameter, 1 in length uncompressed
Button	2 pieces	Outsourced as pre-made	\$0.12 per piece (\$0.24)	½ in diameter, 1/8 thickness
Thin Stainless-steel sheets	~7 feet	Outsourced as pre-made	\$4.78 per foot (~\$33.46)	2 in width (20 in base length, 22 in outer length)
5-point harness and strap mechanism	1 piece	Outsourced as pre-made	\$30.19	Pre-constructed and attached directly to frame
T-handle ball lock pins	2 pieces	Outsourced as pre-made	\$11.09 per piece (\$22.18)	3/8 in diameter, 1-37/64 in length
